Beskrivning

Författare: Per Kågeson.

The European Union has introduced a cap-and-trade system for emissions of carbon dioxide (CO₂) from power production and energy-intensive industries. The fast-growing transport emissions, however, are not yet subject to any cap.

This report is an analysis of the impact on efficiency and costs from including not only aviation and shipping but also the CO₂ emissions from road transport in the European Emissions Trading System (EU ETS). This option is compared to a case where road transport is permanently excluded from the trading scheme and where its emissions would have to be cut by other policy measures and ultimately by allowing higher excise duties on petrol and diesel to depress the demand for fuel.

The analysis shows that the chance of reaching similar marginal abatement costs in the transport sector and the EU ETS is a great deal higher when the Community's commitment is to cut overall greenhouse gases by 20 per cent than in a case where the objective is a reduction by 30 per cent between 1990 and 2020. The more ambitious target is likely to result in a major difference in price increases between the trading and the non-trading sectors as well as between individual member states.

Per Kågeson holds a PhD in Environment and Energy System Analysis and is the author of more than 25 books. His special field of interest is the cost-efficiency of measures and policy instruments for improving the environmental performance of transport.

Annan Information

25 Aug 2010 . So, the expansion of (heavily subsidised) corn for ethanol or other crops for so-called "alternative" fuel can not be considered a sustainable solution, as their advocates (usually .. We know that the EU's trading system for emission rights covers around 12,000 industrial plants that answer for approx. 50 per.

patterns towards a more vegetable-based diet could decrease GHG emissions. However, such change is difficult to . observational study of food retailers in five European countries. British. Food Journal. 116(10) . However, added to this is the understanding that greenhouse gas (GHG) emissions negatively contribute to.

Robust leksaksmotorsåg med ljud från Power Tools i härlig orange färg. Rolig att använda när man ska hjälpa till och "såga" ner träd. Motorsågen är batteridriven med realistiskt motorsågs ljud. Perfekt för den lilla skogsarbetaren eller hantverkaren! 3 st AA-batterier ingår
Ålder: från 3 år Mått: ca 30 cm.

Tools for Cutting European Transport Emissions : CO2 emissions trading or fuel taxation?
Böcker och blad The European Union has introduced a cap-and-trade system for emissions of carbon dioxide (CO2) from power production and energy-intensive industries. The fast-growing transport emissions, however, are not yet.

transportation. ▫ Innventia's internal Research Forum highlights new areas for research and development. The campagne Dragons' Den is launched to bring forward . CARBON FIBRES. Right now, Innventia is building up an R&D infrastructure for carbon fibre from lignin. The process includes plans for a continuous carbon.
